

NEW ASSASSINATION BOMBSHELL

JFK AUTOPSY REPORT DESTROYED

CORONER: This proves cover-up conspiracy

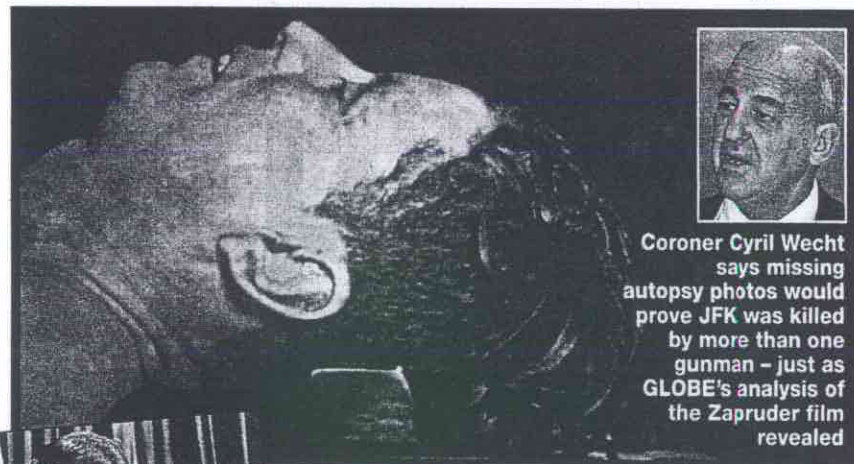

BOMBSHELL new revelations that John F. Kennedy's autopsy files were destroyed or hidden proves that the president's murder was part of a government conspiracy and cover-up, charges a renowned forensic expert.

"This is dynamite stuff," Dr. Cyril Wecht, one of the nation's leading medical examiners, tells GLOBE. "This proves there was a conspiracy to cover up the assassination."

The explosive new information comes from recently released testimony given to the Kennedy Assassination Records Review Board by military personnel who were involved with or witnessed JFK's autopsy.

The president's body had been flown from Dallas' Parkland Memorial Hospital to Bethesda Naval Hospital in Maryland, where three military doctors performed the grisly work on Nov. 22, 1963. One witness testified that Dr. Pierre Finck complained that the handwritten notes he scrawled during the autopsy mysteriously disappeared and he had to re-create them later from memory.

Naval physician Dr. James Humes, who was in charge of the autopsy, ad-

Coroner Cyril Wecht says missing autopsy photos would prove JFK was killed by more than one gunman - just as GLOBE's analysis of the Zapruder film revealed

mitted he burned some of his autopsy papers, stained with JFK's blood, in his fireplace at home.

Lensman John T. Stringer said he was the only photographer present and the photos he took of Kennedy's brain were different from

the official set he saw later.

Saundra Spencer, who developed the film, testified the Kennedy family may have hidden or destroyed actual autopsy photos and ordered a second, cleaned-up set. She thinks a cover-up is possible because she says the photos

from the official archives were not the ones she developed.

JFK's personal physician Adm. George Burkley is said to have carried off a section of the slain leader's brain, which he turned over to the family for burial.

The autopsy also proved the president suffered from Addison's disease, which destroys the adrenal glands. This too was covered up.

Wecht, a coroner for Allegheny County in Pennsylvania who has performed thousands of autopsies, believes this new information points to a conspiracy and confirms GLOBE's July 28th story that the famed Zapruder film shows there was a second gunman.

"The autopsy should've been held in Dallas," he says. "But of course, there was plenty to hide here - like who really killed the president!"

"Much of that conspiracy took place right there in the autopsy room, where important information on the actual wounds of the president were covered up, so that Lee Harvey Oswald could be made into a patsy and the real killers could go free."

The missing set of autopsy pics is especially damning, says Wecht.

"If we had the photos that are said to exist of the president's wounds, we'd have a clear picture of the assassination," he says.

"We would finally know the powerful men who killed the president - and how many assassins took part in his murder."
